

Strong Roofer in Sarasota Fl

Galvalume and aluminum are examples of outstanding corrosion-resistant metal roofing materials. When in condition with high salty-air density, it is advisable to upgrade to aluminum over galvalume.

Another concern: **high winds**

In Florida, we expect strong winds every year, and every year we get them. Powerful winds can wreak havoc with most [types of roofing materials](#) including traditional asphalt shingles and clay tiles. Metal roofing, on the other hand, because of its fastening technology and overall strength, will withstand gale-force winds of 150 miles per hour and more.

[Strong Roofing](#) offers free inspections on your roof. Hurricane preparedness is imperative when prepping your home and roof for hurricane season in Florida.
